I. INTRODUCTION

The purpose of this study was to refine the information base for conducting systematic botanical surveys for Montana Plant Species of Special Concern within the Tongue River vicinity. The main objectives were to identify study area targets among the Montana Plant Species of Special Concern, to characterize the habitats potentially harboring them, and to present technical background information needed to conduct baseline and project clearance surveys. This pilot project represents synthesis of existing secondary information augmented by field reconnaissance.

Montana Natural Heritage Program (MTHP) collects and compiles data on the elements of biological diversity in Montana, including plants species and other biological features that are known or suspected to be rare, endemic, disjunct, threatened, or endangered throughout their range or in Montana. The levels of information and growth in information present in the Biological Conservation Database (BCD) information repository are not uniform across the state, but are determined by innate biological and biogeographic differences and the historical patterns of botanical study, as well as by recent study initiatives and support for expanding the information base.

Limited botanical information resources are available for the Tongue River vicinity, as they are for much of eastern Montana. In the face of incomplete information, one can make unfounded inferences, or develop a system of setting targets and adopting a standard methodology to survey for them. This report presents a replicable framework for setting targets among Montana Plant Species of Special Concern and presents the slate of targets for the Tongue River Area.

II. STUDY AREA

The Tongue River study area is in southeastern Rosebud County. Four discrete segments were identified as having primary interest to the Department of Environmental Quality (DEQ), all centered around Colstrip. Fieldwork reconnaissance spanned the highest priority DEQ segments east of Colstrip. In addition, the Fort Keogh Livestock Range and Research Laboratory at Miles City, downstream in Custer County, was included in this stage of fieldwork because it has been documented as having a relatively large number of Montana Plant Species of Special Concern, much of its habitat is similar to that in the Colstrip area, and there are many outstanding questions about the habitat requirements and status of its potentially rare species.

The study area will be referred to as the Tongue River area throughout this report, consistent with the DEQ focus. The database search spanned surrounding counties as they shed light on the Tongue River area of Rosebud County, including all of Rosebud, Big Horn, Custer, Powder River, Treasure, and Yellowstone counties. They all share the prevailing surface geology, and are not well studied compared to similar-size areas of western Montana.

The sweeping, unglaciated landscape of the Tongue River vicinity is carved by erosion out of the Fort Union Formation, a heterogeneous Paleocene sedimentary deposit made up of sandstone, shale, bentonite, lignite, and other materials. It is dissected by Quaternary alluvial deposits along major rivers and tributaries. It lies entirely within the unglaciated segment of the Great Plains biogeographic province, but is part of the extensive Yellowstone Highlands subregion, a dry plains area of extensive pine woodland reflecting the Black Hills and Big Horn Mountains influence. The biogeography of the flora is accordingly dominated by the Great Plains flora with major Rocky Mountains influence, and minor contributions among Great Basin, Central Plains, and eastern deciduous forest influences.

The flora and the vegetation of the Tongue River vicinity and of eastern Montana in general have not been well-documented apart from general vegetation and sensitive species studies on Custer National Forest, vegetation studies on Cheyenne Reservation lands, unpublished mine studies and initial BLM studies. The most complete floristic information for the Colstrip area is presented in Coenenerg (1983); reviewed for purpose of this study (see next page). The task of expanding current botanical information requires that one assemble and synthesize a broad set of existing background botanical and other reference materials. The primary references used in the course of this study are listed in Table 1.

III. METHODS

The references outlined in Table 1 were assembled to conduct field surveys for Montana Plant Species of Special Concern (Heidel 1996a). The next step was to search the state element occurrence database maintained by Montana Natural Heritage Program in the Biological Conservation Database (BCD) for plant records. The customary data search done for environmental reviews is designed to span a 1-10 mile radius around a given project area. A revised approach is recommended for baseline botanical fieldwork survey projects as represented in this study. The likelihood of any single area of eastern Montana being surveyed in the past is slim, so a search that spans the county and adjoining counties was conducted. Element occurrence records (EORs) were printed out of Montana Plant Species of Special Concern in the six-county area centered on the Tongue River study area to identify known and prospective rare plant species. The records presented in full in Appendix A, mapped in Figure 1, and species photo reproductions are printed in Appendix B.

The next step was to identify which of the species occupy habitat as found in the project area or site. For eastern Montana, this is best done by comparing species' habitat descriptions against soils information and any other available information about the area or site as well as by on-site inspection. Species' habitat information is available on the individual EORs under general description, and it is summarized in a description of species' statewide habitat that is now completed for all Montana Plant Species of Special Concern. The results of the search for species and their habitats across the six-county area as it may apply to Tongue River project areas is summarized in Table 2.

We have developed search engines on the Internet so that both steps of fieldwork preparation can be conducted start-to-finish with Internet connections from anywhere in the state. We are still maintaining the services for users without Internet access. The Internet option will enable users to compile lists of Montana Plant Species of Special Concern by county, and to look up the habitat descriptions for each species in guidebook entries posted for each species. The species identified for the six-county area, and their habitats, are presented in Table 2 as the targets for the Tongue River fieldwork reconnaissance, with notes made from the guidebook text on their habitat requirements.

The final step in this baseline survey was to conduct a two-pronged field evaluation:

1. Locate the habitats potentially harboring rare species including the best and largest examples, and survey for the species
2. Identify the full range of environmental conditions on the landscape and visit a representative set to conduct floristic reconnaissance for any other targets species which may not be previously known from the area.

Figure 1. Montana Plant Species of Special Concern for consideration in the Tongue River Area

Montana Plant Species of Special Concern for consideration in the Tongue River Area

Table 2. MONTANA PLANT SPECIES OF SPECIAL CONCERN CONFIRMED OR POTENTIALY WITHIN TONGUE RIVER PROJECT AREAS¹

SCIENTIFIC NAME	COUNTY OF DISTRIBUTION	HABITAT
<i>Amorpha canescens</i> Leadplant	CART, ROSE	Presumed to be in thinsoil upland
<i>Asclepias stenophylla</i> Ovalleaf Milkweed	CART, ROSE	Loose upland sand
<i>Aster simplex</i> var. <i>ramosissimus</i> Branching aster	POWD	Floodplain
<i>Astragalus barri</i> Barr's milkvetch	BIGH, CART, POWD, ROSE	Calcareous shale and siltstone outcrops
<i>Astragalus racemosus</i> Raceme milkvetch	CART, CUST, FALL	Shale and thinsoil uplands
<i>Bidens frondosa</i> Beggar's-ticks	CUST	Wetland/riparian
<i>Carex gravida</i> Pregnant sedge	BIGH, POWD, ROSE	Woody draws, possibly other deciduous uplands
<i>Ceanothus herbaceus</i> New Jersey Tea	POWD	Open pine forest; possibly moist microhabitat

¹This list includes species which are being tracked, which were considered for tracking prior to this project, or which are being considered as a results of this project.

<i>Chenopodium subglabrum</i> Smooth Goosefoot	CART, CASC, CUST	Loose upland and riparian sand
<i>Cyperus schweinitzii</i> Schweinitz' Flatsedge	CART, CASC, CUST, SHER	Loose upland sand, possible riparian sand
<i>Dalea enneandra</i> Nine-anther Dalea	CUST, RICH, YELL	Gravelly, possibly sandy upland slopes
<i>Dichanthelium oligosanthes</i> var. <i>scribneri</i> Scribner's Panic Grass	LAKE, POWD	Sandy, open settings in pine woodland
<i>Eupatorium maculatum</i> Joe-pye Weed	BIGH, CARB, ROSE	Wetland margins
<i>Evax prolifera</i> Big-head Evax	CUST, POWD	Badlands outwash
<i>Lomatium nuttallii</i> Nuttall's Desert-parsley	BIGH	Loose sand around outcrops
<i>Mentzelia nuda</i> Bractless Mentzelia	PARK, POWD	Sandy or gravelly upland slopes
<i>Penstemon angustifolius</i> Narrowleaf Penstemon	CART, DAWS, CUST, MISS	Sandy uplands
<i>Penstemon grandiflorus</i> Large-flowered Beardtongue	CUST	Loose floodplain sand
<i>Phlox andicola</i> Plains Phlox	CART, DAWS, ROSE, WIBA	Loose upland sand
<i>Physaria didymocarpa</i> var. <i>lanata</i> Wooly Twinpod	BIGH	Clinker and shale outcrop
<i>Plagiobothrys leptocladus</i> Slender-branched Popcorn-flower	CUST, GLAC, PHIL	Wetland
<i>Prunus pumila</i> Sand Cherry	FALL, MCCO	Sandy or rocky upland

<i>Psoralea hypogaea</i> Little Indian Breadroot	CASC, CHOT, ROSE	Loose upland sand
<i>Rorippa calycina</i> Persistentsepal Yellowcress	CASC, CHOT, CUST, MCCO, YELL	Sandy river terrace edge
<i>Sporobolus asper</i> Longleaf Dropseed	CART, CASC, POWD	Unknown
<i>Viburnum lentago</i> Nannyberry	BIGH, ROOS	Open forest and grassland

Fieldwork was conducted June 10-11 and August 28-30 of 1996, focusing on the public lands east of Colstrip during the first period, and on Fort Keogh Livestock and Range Laboratory during the second period. In the Colstrip area, the survey targeted the range of potential habitats as present on public lands. In the Fort Keogh area, the focus was on relocating collection sites of Montana Plant Species of Special Concern if information was sparse or absent on species' habitat requirements. All new records were documented on a standard survey form (Appendix C). They were photographed, and collections were made for vouchers that have been deposited at the University of Montana in keeping with the Montana Native Plant Society guidelines (1993). All field information was subsequently transcribed and mapped for entry into the Biological Conservation Database.

IV. PRELIMINARY RESULTS AND DISCUSSION

Three Montana Plant Species of Special Concern were newly documented in the immediate Tongue River study area: *Asclepias stenophylla*, *Phlox andicola* and *Psoralea hypogaea*. A new record was made of a species that had been previously documented: *Astragalus barrii*. One other species that was considered a Montana Plant Species of Special Concern, *Evax prolifera*, was dropped from tracking because it was determined to be an increaser under heavy grazing and unlikely to be imperiled.

In the Fort Keogh area, one new addition to the state flora was documented: *Bidens frondosa*, associated with trampled riparian habitat and put onto the state watch list. The single known record of *Penstemon grandiflorus* was relocated, but the species is unlikely to have potential habitat in Tongue River area. Efforts to relocate *Cyperus schweinitzii* and *Sporobolus asper* were unsuccessful.

The new information that was collected on the current Montana Plant Species of Special Concern is presented among the element occurrence records in Appendix A for the following:

Asclepias stenophylla #004

Astragalus barrii #038

Penstemon grandiflorus #001

Phlox andicola #004

Psoralea hypogaea #005, #006

Information collected on watch species (*Bidens frondosa*, *Evax prolifera*, *Ipomopsis congesta* var. *pseudotypica*, *Sporobolus asper*), including collection records and a synopsis of their current status, is on file separately. There are now four species confirmed as occurring in the Tongue River study area. Seven more species were identified as potentially occurring here. They are identified in Table 3, next page. Most

of them occupy sandy upland range sites, with possibly exception of *Amorpha canescens*, *Astragalus barrii*, *Carex gravida*, and *Rorippa calycina*. We do not rule out the possibility of other species identified in Table 2 occurring here, but they have low likelihood as determined from known distribution and habitat information.

Table 3. REVISED MONTANA PLANT SPECIES OF SPECIAL CONCERN LIST FOR TONGUE RIVER AREA

SCIENTIFIC NAME	TONGUE R. STATUS	GLOBAL RANK	STATE RANK	STATUS REPORT
<i>Amorpha canescens</i>	In question	G5	SH	Vanderhorst et al. In prog
<i>Asclepias stenophylla</i>	Confirmed	G4G5	S1	Heidel and Dueholm 199
<i>Astragalus barrii</i>	Confirmed	G3	S3	Heidel and Marriott 1996
<i>Carex gravida</i>	Suspected	G5T?	S1	Heidel and Marriott 1996
<i>Chenopodium subglabrum</i>	Suspected	G3	S1	Vanderhorst et al. In prog
<i>Cyperus schweinitzii</i>	Suspected	G5	S1	Vanderhorst et al. In prog
<i>Lomatium nuttallii</i>	Suspected	G4	S1	-
<i>Mentzelia nuda</i>	Suspected	G5	S1	-
<i>Phlox andicola</i>	Confirmed	G4	S1	Heidel and Dueholm 1995
<i>Psoralea hypogaea</i>	Confirmed	G5T4?	S2	Heidel 1997a
<i>Rorippa calycina</i>	Suspected	G3	S1	-

Three of the species above are regional endemics (Global rank = G3; globally vulnerable), but most are at the margins of their range. Almost all are known from five or fewer occurrences in the state (State rank = S1). Leadplant (*Amorpha canescens*) has been reported from the Colstrip area (Coenenberg 1983) but we have not been able to find collection records to date. This is a species which is otherwise only known from historic collection records in Montana (State rank = SH).

Copies of the most current status reports for the species documented in the study area are cited in the table above. These status reports present statewide status information but emphasize the study area in question. The Tongue River study took place subsequent to most of these reports. We are currently engaged in a botanical survey of Bureau of Land Management lands in Carter County (Vanderhorst et al. In progress) which is expected to expand and revise this information for several species.

It is interesting to note that two of the taxa identified in Table 2, *Evax prolifera* and *Ipomopsis congesta* var. *crebifolia*, were recently discovered as additions to the state flora (Heidel and Marriott 1996, Heidel 1996b). New populations of both taxa were subsequently discovered in the Tongue River study area during this project, expanding their known distribution. This corroborates the remark that the flora of the study area has not been well-studied, and supports the case for thorough project surveys.

The results of this preliminary Tongue River botanical survey have recently been used to revise the content and status information among the Montana Plant Species of Special Concern (Heidel 1997b). This preliminary Tongue River study represent a compilation of the best available botanical information, but it is only a starting point for conducting initial project reviews, project clearances and determinations of effects.

Plant Species of Special Concern for Consideration in the Tongue River Area

Scientific Name: ASTRAGALUS BARRII
Common Name: BARR'S MILKVETCH

Global rank: G3 Forest Service status: SENSITIVE
State rank: S3 Federal Status:

Element occurrence code: PDFAB0F150.004
Element occurrence type:

Survey site name: COLSTRIP
EO rank:
EO rank comments:

County: ROSEBUD

USGS quadrangle: COLSTRIP SE

Township: Range: Section: TRS comments:
001N 041E 11 NE4

Precision: M
Survey date: 1975-05-20 Elevation: 3580 -
First observation: 1975 Slope/aspect:
Last observation: 1975-05-20 Size (acres): 0

Location:
MONTANA STATE DEPT. OF HEALTH MONITORING SITE, 1.5 MI. SE. OF
COLSTRIP.

Element occurrence data:
UNKNOWN.

General site description:
STEEP BUTTE WITH MANY ROADCUTS AND GRAZING MARKS; ON BORDER OF
WATERSHED 10100003.

Land owner/manager:
PRIVATELY OWNED LAND (INDIVIDUAL OR CORPORATE)

Comments:

Information source: SCHASSBERGER, L. A. 1990. REPORT ON THE
CONSERVATION STATUS OF ASTRAGALUS BARRII, A
CANDIDATE THREATENED SPECIES. UNPUBLISHED REPORT
TO THE U.S. FISH & WILDLIFE SERVICE, DENVER.
MONTANA NATURAL HERITAGE PROGRAM, HELENA, MT. 85
PP.

Specimens: LACKSCHEWITZ, K. H. (5950). 1975. SPECIMEN #076530.
MONTU. DUP. DET. R. BARNEBY, NY.

Element occurrence type:

Survey site name: BIDDLE SCHOOL SECTION
EO rank: A
EO rank comments: LARGE POPULATION, MOST SITES NOT HEAVILY IMPACTED
BY GRAZING

County: POWDER RIVER

USGS quadrangle: BIDDLE

Township: Range: Section: TRS comments:
008S 052E 36 N2, SW4

Precision: S
Survey date: 1986-05-20 Elevation: 3600 -
First observation: 1986 Slope/aspect:
Last observation: 1986-05-20 Size (acres): 128

Location:
CA. 2 AIR MILES ESE OF BIDDLE, 0.3-0.9 AIR MILES NE OF THE
BIDDLE-RIDGE ROAD, 2.25 MILES SE OF ITS JUNCTION WITH STATE HWY 59,
NORTH OF RANCH CREEK.

Element occurrence data:
CA. 600-700 PLANTS, IN 10 SUBPOPULATIONS; FLOWER AND EARLY FRUIT;
EVIDENCE OF LIVESTOCK GRAZING, ESPECIALLY ON LOWER SLOPES.

General site description:
GULLIED SLOPES, BLUFFS, AND ALONG RIDGELINES, IN CLAY SOIL DERIVED
FROM SAND AND SILTSTONE; ARTEMISIA TRIDENTATA/ ATRIPLEX
CONFERTIFOLIA/GRASSLAND "BADLANDS".

Land owner/manager:
STATE LAND - UNDESIGNATED

Comments:
SEE GMF FOR BASE MAP SHOWING SUBPOPULATIONS.

Information source: SCHASSBERGER, L. A. 1990. REPORT ON THE

Montana Natural Heritage Program
Plant Species of Special Concern for Consideration in the Tongue River Area

Scientific Name: PSORALEA HYPOGAEA
Common Name: LITTLE INDIAN BREADROOT

Global rank: G5T4? Forest Service status:
State rank: S2 Federal Status:

Element occurrence code: PDFAB5L0C1.005
Element occurrence type:

Survey site name: GREENLEAF CREEK
EO rank: CD
EO rank comments: FAIR HABITAT QUALITY, SMALL POPULATION.

County: ROSEBUD

USGS quadrangle: HAMMOND DRAW SW

Township: Range: Section: TRS comments:
001S 043E 14 NW4SW4

Precision: S
Survey date: 1996-06-11 Elevation: 3160 -
First observation: 1996-06-11 Slope/aspect: 0-2% / EAST
Last observation: 1996-06-11 Size (acres):

Location:
TAKE TONGUE RIVER ROAD CA. 10 MILES NORTH FROM ASHLAND, THEN GO WEST
AND NORTH ON LAY CREEK ROAD CA. 6 MILES. POPULATION IS ON SANDSTONE
OUTCROP ABOVE GREENLEAF CREEK.

Element occurrence data:
4 PLANTS IN BUD, ALONG NARROW BAND OF SUITABLE HABITAT.

General site description:
BASE OF SMALL SANDSTONE OUTCROP, AT SOUTHEAST END. THE LOOSE SAND WAS
LOCALLY DOMINATED BY SCHIZACHYRIUM SCOPARIUM IN PARTIAL SHADE OF PINUS
PONDEROSA. ASSOCIATED SPECIES: CALAMOVILFA LONGIFOLIA, PSORALEA
PSEULENTA, ASTRAGALUS PURSHII, ASCLEPIAS OVALIFOLIA.

Land owner/manager:
BLM: MILES CITY DISTRICT, POWDER RIVER RESOURCE AREA

Comments:
MODERATE LONG-STANDING CATTLE USE IN AREA CHANGING FORB COMPOSITION.
PINE SAPLINGS ENCROACHED IN PART OF POTENTIAL HABITAT.

Information source: HEIDEL, BONNIE. [BOTANIST] MONTANA NATURAL
HERITAGE PROGRAM, 1515 EAST SIXTH AVENUE, P.O. BOX
201800, HELENA, MT 59620-1800. WORK: 406/444-3009.

Plant Species of Special Concern Survey Form

1997 Revision

MONTANA NATURAL HERITAGE PROGRAM

1515 E. Sixth Avenue, Helena, MT 59620-1800

SCIENTIFIC NAME: _____ DATE OF SURVEY: ____/____/____

OBSERVER(S): _____

WORK LOCATION / ADDRESS: _____

Location: (attach a copy of pertinent 7.5' or 15' topographic map section with locations of populations/subpopulations outlined, one map for each sensitive species described.)

COUNTY: _____ USGS QUAD: _____

TOWNSHIP: _____ RANGE: _____ SEC.(s): _____ ¼ SEC.: _____

ADDITIONAL T/R/S, SECTIONS OR ¼ SEC.: _____

NATL. FOREST DISTRICT/BLM DISTRICT RA/OTHER: _____

DIRECTIONS TO SITE (Refer to towns, roads, trails, other geographic features): _____

Species Autecology

TOTAL NUMBER OF INDIVIDUALS (estimated or exact population count; sum clumps or stems if vegetative): _____

NUMBER OF SUBPOPULATIONS AND SUBTOTALS (if applicable): _____

SIZE OF AREA COVERED BY POPULATION (acres): _____

PHENOLOGY (% flowering, fruiting, vegetative): _____

EVIDENCE OF DISEASE, PREDATION, INJURY: _____

EVIDENCE OF SEED DISPERSAL, ESTABLISHMENT: _____

POPULATION TREND/OTHER COMMENTS: _____

Habitat: (Describe the distinguishing features of the environment on next page, adding landform and the nature of the species' habitat in the setting):

ELEVATION (mean or range): _____ ASPECT: ☐ N ☐ NE ☐ E ☐ SE ☐ S ☐ SW ☐ W ☐ NW

% SLOPE: _____ SLOPE SHAPE ☐ Concave ☐ Convex ☐ Straight ☐ Other _____

TOPOGRAPHY: ☐ Crest ☐ Upper ☐ Mid ☐ Lower ☐ Bottom ☐ Other _____

MOISTURE: ☐ Dry ☐ Moist ☐ Saturated ☐ Inundated ☐ Seasonal seepage ☐ Other _____

LIGHT EXPOSURE: ☐ Open ☐ Shaded ☐ Partial shade ☐ Other _____

PARENT MATERIAL: _____

SURFACE COVER (TOTAL %): MOSS/LICHEN _____ BASAL VEG. _____ BARE GROUND _____

SOIL TEXTURE/SERIES: _____

CANOPY COVER: TREE (%) _____ SHRUB (%) _____ FORB (%) _____ GRAMINOID (%) _____

PLANT COMMUNITY: (dominant species at present, age and structure notes): _____

CLIMAX VEGETATION (if not above): _____

ADDITIONAL ASSOCIATED PLANTS (include most common, conspicuous, and characteristic spp.): _____

EVIDENCE OF DISTURBANCE: _____

Documentation: _____

PHOTOGRAPH TAKEN? (if so, indicate photographer and depository): _____

SPECIMEN TAKEN? (if so, list collector, collection #, and repository): _____

IDENTIFICATION (name of person making determination, and/or flora used): _____

ECODATA PLOT NUMBER (attach photocopied data sheets): _____

OTHER DOCUMENTATION OR REFERENCES: _____

Comments: _____
